

Basic Range

BU1-AC-UO- Voltage Relay

Application

Over and undervoltage supervision of 1 and 3 phase systems.

Function

Unit BU1-AC-UO is equipped with an independent over ($U >$) and undervoltage supervision ($U <$) with separate adjustable pickup values, common trip delay (t) and hysteresis (DIFF). The voltages are compared with the set reference values.

For three-phase overvoltage supervision the highest voltage in each phase is evaluated, for undervoltage supervision the lowest in each phase.

Pickup of supervision circuit $U >$ or $U <$ is indicated by flashing of the corresponding LED.

At $U <$ tripping LED $U <$ extinguishes, at $U >$ tripping LED $U >$ is steady lit.

At voltages $< 60\% U_n$ no trip delay takes place.

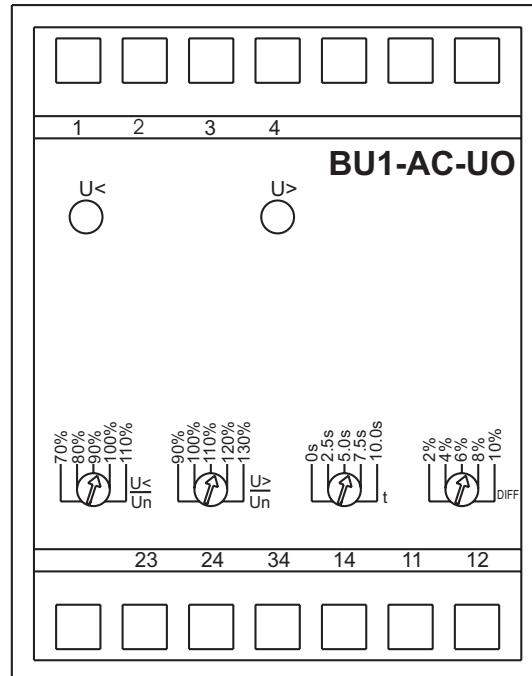

Fig. 1 : Front plate

The unit BU1-AC-UO is designed to be fastened onto a DIN rail acc. to DIN EN 50022 same as all units of the BASIC RANGE.

The front plate of the unit is protected with a sealable openings with a screw drive to adjust the relay.

LEDs

LED $U <$ is used to indicate trouble free operation with steady light. LEDs $U >$ and $U <$ indicate pickup of the relay by flashing. At undervoltage tripping LED $U <$ extinguishes. LED $U >$ indicates tripping at over voltage (steady light).

Auxiliary voltage supply

Unit BU1-AC-UO needs no separate auxiliary voltage supply. The supply voltage can be formed directly from the measuring quantity.
