1) Introduction

CSFPI, Fault Passage Indicator is designed to detect and indicate Earth fault on a cable system, in RMU networks with one input / open ring arrangement. The product is powered by the Internal Battery only. The unit will indicate a fault condition when current is detected above set trip current settings. Fault current is sensed by cable mounted sensor, which gives signal to indication unit. Sensor must be mounted on screened cable and can be retrofitted on the cable.

2) Features

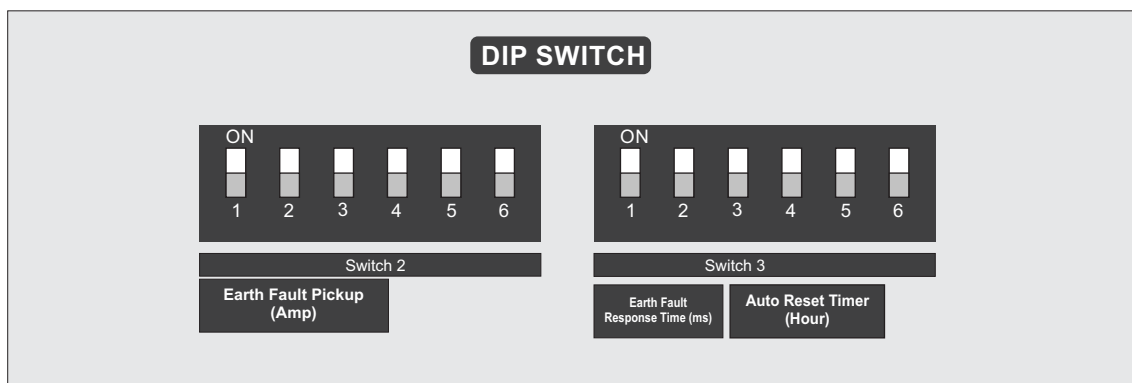

- Programmable Earth fault pickup level (wide range) *
- Programmable response delay for Earth-fault *
- Indication of earth-fault by blinking of Earth-fault LED
- Up-to Two potential free contacts to indicate earth-fault. (remote indication for SCADA)
- Various Reset option for Fault Reset (Please refer specification table on page 7)

3) Functional Description

If the Earth current exceeds programmed set current for programmed response time the fault will be indicated by red flashing LED and relay contact will be activated. Reset occurs automatically by preset time passage or by a external potential free input or by recovering of Voltage (Not an Aux. Supply) or by manually via push button. A Functional Test can also be carried out on field by pressing for more than 3 Sec and Battery Test by pressing the Push button for more than 6 Sec.

The sensor for earth fault detection is a summation type current sensor and it is dimensioned in such a way that it can be mounted around all three phases of the network.

Programmable parameters can be set through DIP switches which are accessible by opening the Front Cover of the CSFPI indication unit. Exit (Disable) option is available for fault detection.

(Refer Table on Page - 7 for Setting Details)

4) Front Interface

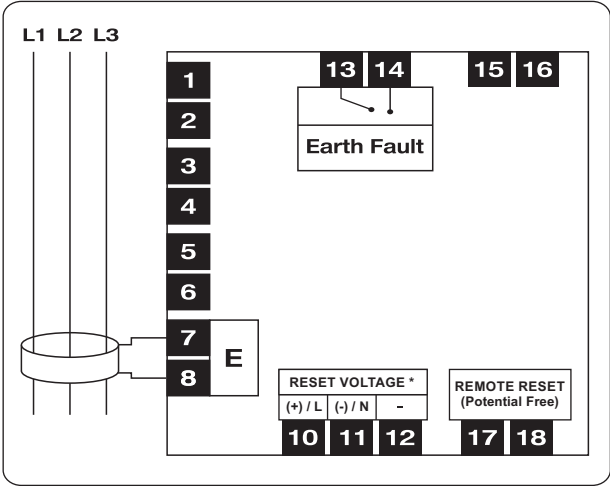

Note: open the Front plate by removing the front screw to access the DIP switch setting.

CAUTION : Remote Reset Signal requires 200msec pulse. Continuous signal can reduce battery life.

6) General Data

Subject	Value
Earth-Fault Trip Current (Phase to Ground)	: Adjustable: : For Range : Refer Table on page 7 ($\pm 15\%$) **
Earth Fault Response Time	: Adjustable : For Range : Refer Table on page 7 ($\pm 100\text{msec}$) **
Indication Unit	: Suitable for panel installation
Indication of a) Earth-Fault b) Battery	: a) One Red LED for Earth-Fault : b) One Yellow LED for Battery Test
Reset of the Indicator	: a) Manual by push-button : b) Automatic Reset by Time : Refer Table on page 7 : c) Self-acting after recovering of 230V AC/DC (Range: 22V - 260V AC/DC) : d) Remote Reset (Potential Free Input) - Remote Reset Signal requires 200msec pulse. Continuous signal can reduce battery life.
On Site Function Test	: By Push-Button
Dimensions	: Refer Page No. 8 for dimension details
Protection Class	: Indication Unit - IP50, Sensor - IP67
Type Test	: According to IEEE 495-2007
Operation Temperature Range	: -25°C to $+70^{\circ}\text{C}$
Power Supply	: Lithium Battery 3.6V / 2.7 Ah (Mandatory)
SCADA Contact *	: Max. 2 Latch Contacts : Nominal Switching Capacity: 2A 30V DC, 0.25A 240V AC (Resistive Load) : Max. Switching Power: 60W, 60VA (Resistive Load) : Max. Switching Voltage: 220V DC, 250V AC
Earth-Fault Sensor (CT)	: One Earth-Fault Sensor Type CS-x-ES-x-x for a Three-Core Cable : Diameter : various option available (Based on ordering information)
Connection & Mounting	: Screwed Terminal Connector at the rear side of the unit for connection. The unit is Panel mount.

** Accuracy claimed at 50Hz
